JCW:

In reviewing your trip contacts it seems to me you missed some of the most important people whom you should have met - there are at least 20 - and next trip, we must correct this. We really must think of a way for me to be with you at least part of the time, not only for this reason but for enlarged press contacts. The more I think of you being there at the beginning of one of our Presidential years - 1960 - election years, I mean - the more important it seems. As you think now about what you might be going to say then, keep this in mind. You can help clarify American thinking about Asia and so indirectly perhaps help the Presidential chances of the most far-visioned candidate.

Which reminds me, re recent news: do you think Khrushchev will seek asylum in the U.S. on his September visit there - and run for the U.S. Presidency in 1960 on the Democratic ticket??? What a lovely rumor to start!! Personally, I think Nehru should be the USA President for awhile.

The enclosures are bits I have excerpted from The Tibetan books for Palmer Craig, and several others in various countries. They are mostly on the future role of science and on predictions of coming developments particularly between 1965 and 2025. They will be worth your glancing through. I give them to you now because there is no way of finding this material in the books unless you just happen to run across it, and that might take years.

JM
